*In the 1930s, Japanese scientists committed heinous crimes in their quest for the ultimate biological weapon.*

*The war ended. Their mission did not.*

Eighty years later, Japanese-American scientist Amika Nakamura won't let rules stand between her and scientific glory. When the ambitious young virologist defies a ban on the genetic manipulation of influenza, she's expelled from the university. Desperate to save her career, she accepts a position with a pharmaceutical company in Tokyo. Soon after, a visit to a disputed island entangles her in a high-profile geopolitical struggle between Japan and China. Applying her singular expertise with bird flu in a risky experiment may be the only way out. Little does she know that Japanese ultranationalists and a legacy of unpunished war crimes lurk in the shadows, manipulating people, politics, and science.

But DNA doesn't lie. Amika uncovers a shocking truth: a deadly virus is about to put the "gene" in genocide.
